DETAILED ACTION

Terminal Disclaimer

The terminal disclaimer filed on August 15, 2002 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U.S. Patents 6,129,640 and 6,213,896 have been reviewed and is accepted. The terminal disclaimer has been recorded.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1 and 2 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 and 8 of copending Application No. 09/667301 in view of Farrally et al. (Science and Golf III). Although the conflicting claims are not identical, they are not patentably distinct from each other because Application No. 09/667301 discloses the same subject matter except for having an intermediate layer with a specific gravity of 1.2 or less and explicitly disclosing a cover thickness of 1.6 to 2.3mm. Claim 8 of application No. 09/667301

Application/Control Number: 09/776,663

Art Unit: 3711

claims the core having a diameter of at least 32mm and Claim 1 claims the mantle thickness to be up to 1.5mm. This inherently implies that the cover cannot exceed 3.81 mm if the golf ball has to meet USGA requirement which is to have a ball of 1.68 inches, therefore, encompassing the cover range claimed in the present application. Farrally et al. discloses that having double core are beneficial as far as being able to adjust the moment of inertia, thereby controlling spin and roll (See Page 411). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have a mantle layer of any specific gravity amount, as taught by Farrally et al., in order to optimize the spin and roll of the golf ball to that desired by the user.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Response to Arguments

Applicant's arguments with respect to claims 1 and 2 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alvin A. Hunter whose telephone number is 703-306-5693. The examiner can normally be reached on Monday through Friday from 7:30AM to 4:00PM Eastern Time.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul Sewell, can be reached on (703) 308-2126. The fax phone number for the organization where this application or proceeding is assigned is 703-308-7768.
